Microsoft has finally released the Internet Explorer 7 Final (IE7 Final). If you own a licenced copy of windows, you can download and install ie7 directly visiting microsoft ie7 website [here](http://www.microsoft.com/windows/ie/default.mspx) (<http://www.microsoft.com/windows/ie/default.mspx>)

But if your copy is not original you will have to bypass the Windows Genuine Advantage (WGA). Here is how to crack Internet Explorer 7 Final (IE7 Final):

Step 1:

Download Microsoft Internet Explorer 7 Final.

Get it from [RapidShare](http://rapidshare.de/files/37372978/IE7-WindowsXP-x86-enu.exe) or [Microsoft](http://www.microsoft.com/windows/ie/downloads/default.mspx)

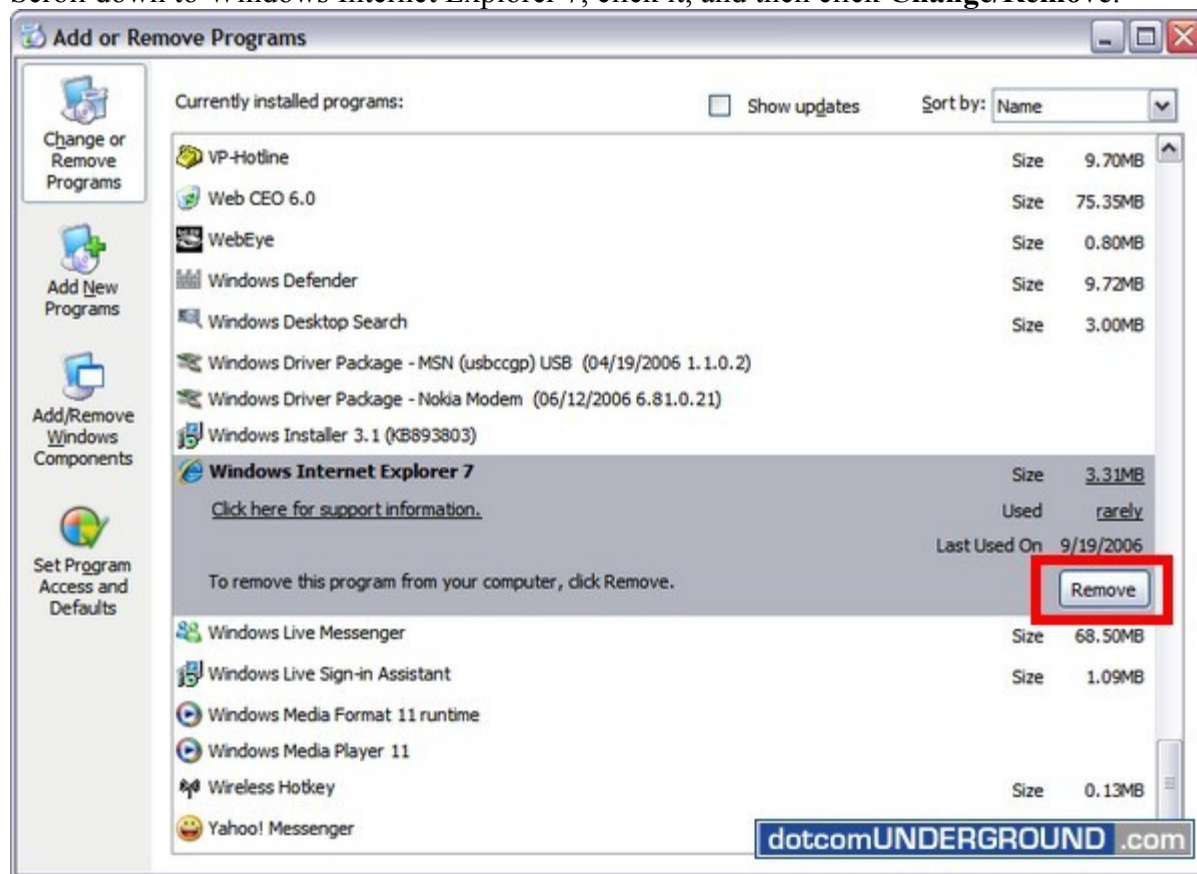

(<http://rapidshare.de/files/37372978/IE7-WindowsXP-x86-enu.exe> or <http://www.microsoft.com/windows/ie/downloads/default.mspx>)

Step 2:

Uninstall any previous version of Internet Explorer 7.

Go to **Start > Control Panel > Add or Remove Programs**

Scroll down to Windows Internet Explorer 7, click it, and then click **Change/Remove**.

Step 3:

Download the required cracks (iecustom.dll and normaliz.dll):

[IE7_Final_WGA_Crack.zip](#)

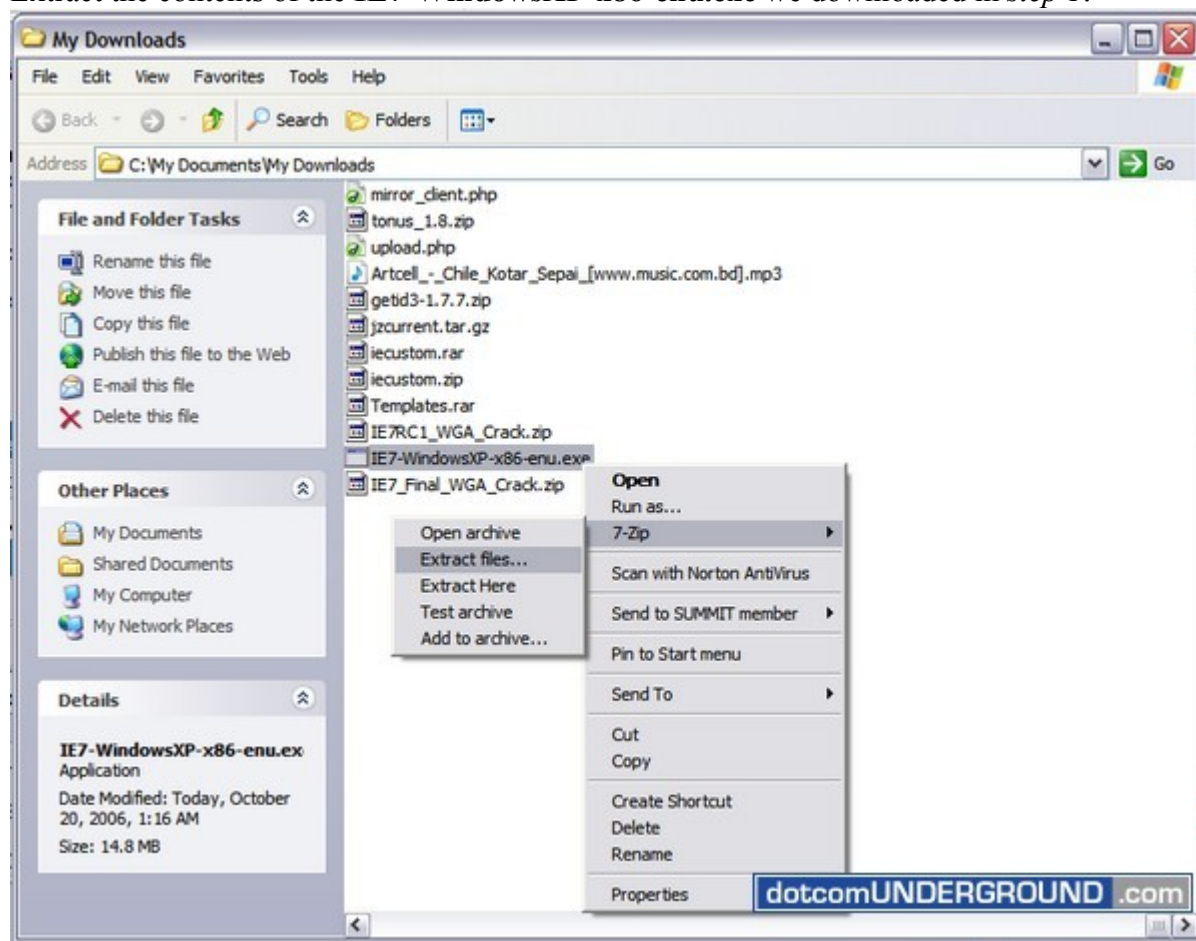

(http://rapidshare.de/files/37374871/IE7_Final_WGA_Crack.zip)

In case this link is no longer valid, please find an updated link at

<http://www.dotcomunderground.com/blogs/2006/10/20/install-internet-explorer-7-final-bypassing-wga-validation/>)

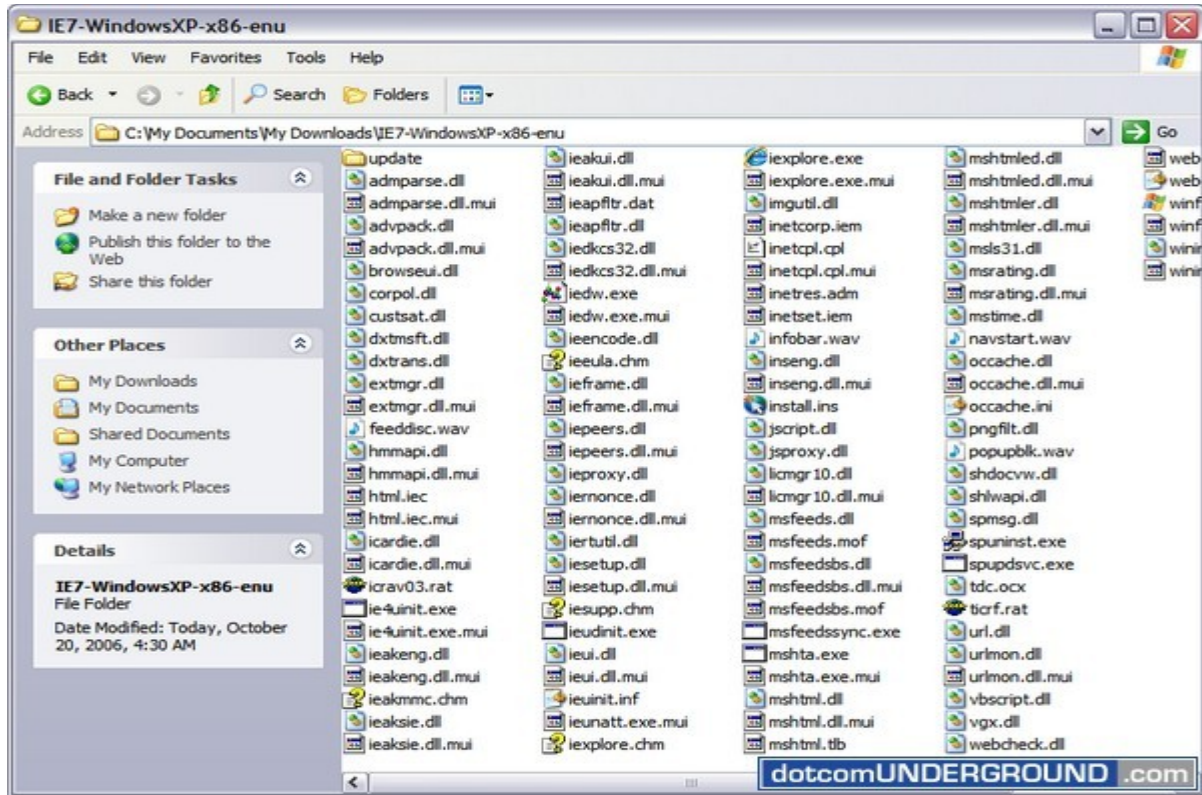

Step 4:

Extract the contents of the **IE7-WindowsXP-x86-enu.exe** we downloaded in *step 1*.

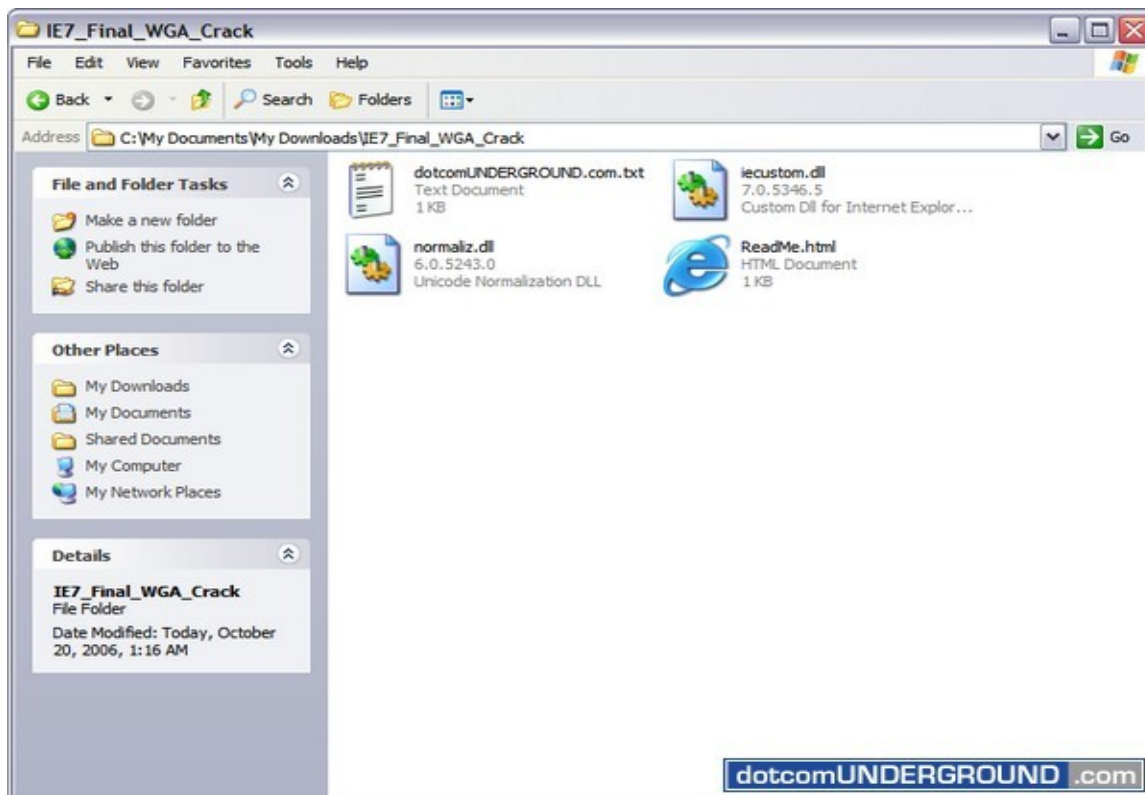

You can use WinRAR or 7Zip to extract the file contents.

Here is what you should get:

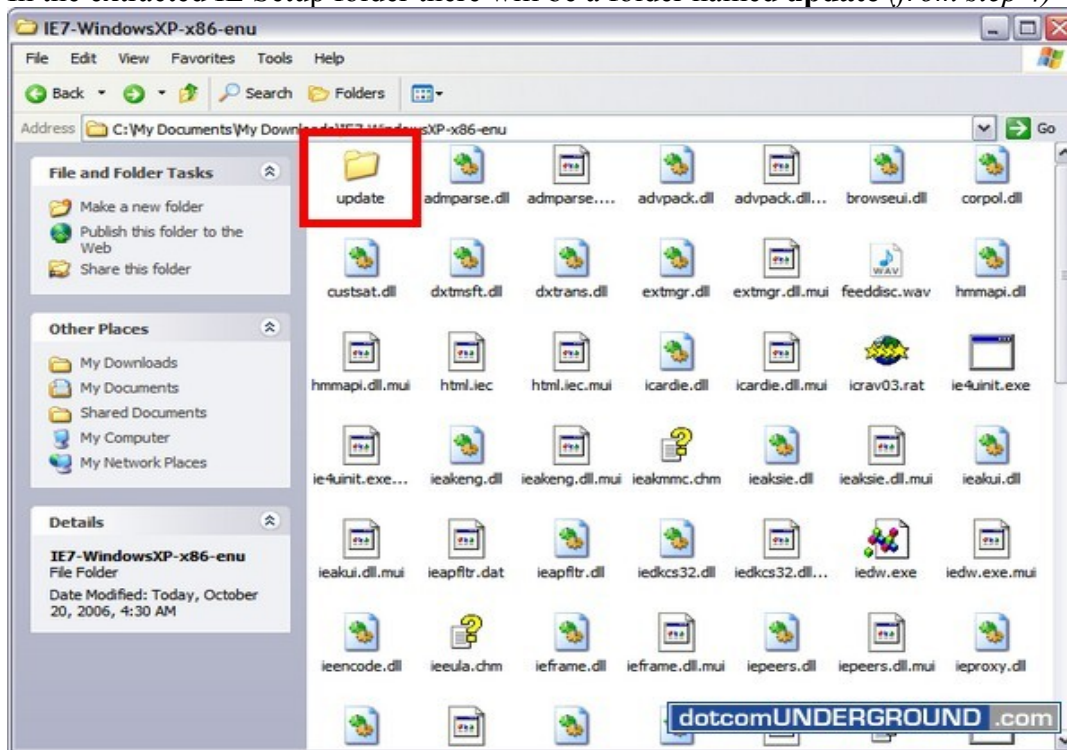

Extract the **IE7_Final_WGA_Crack.zip** file as well

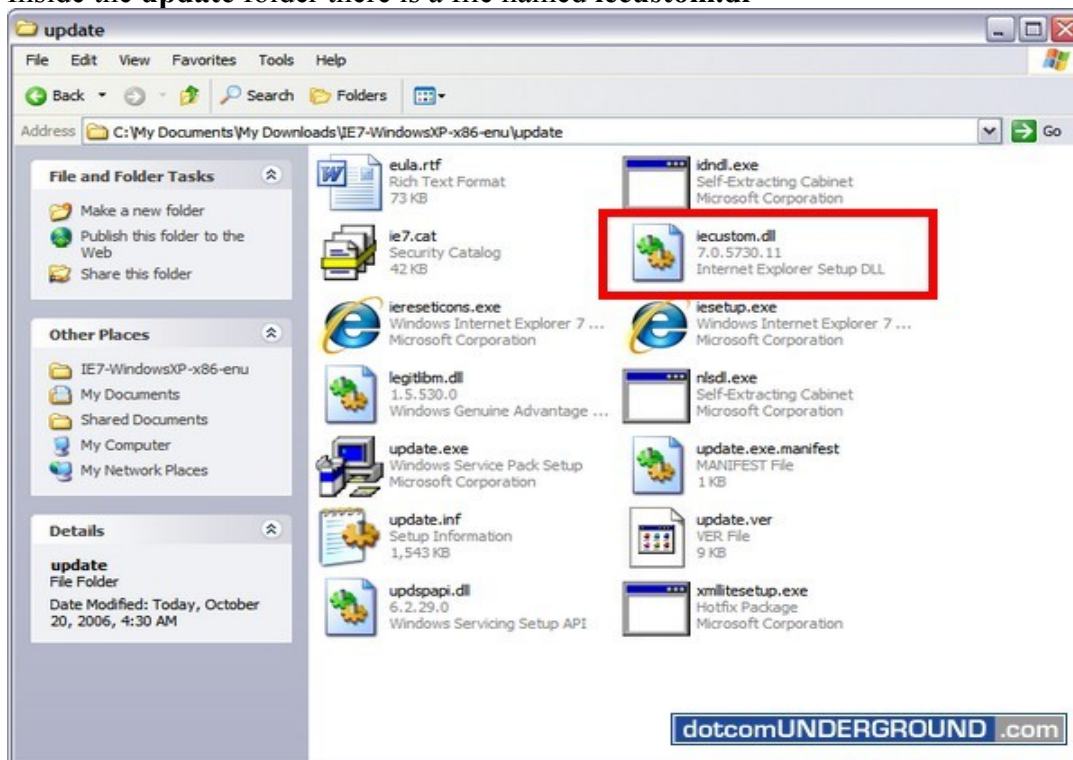

Step 5:

In the extracted IE Setup folder there will be a folder named **update** (from step 4)

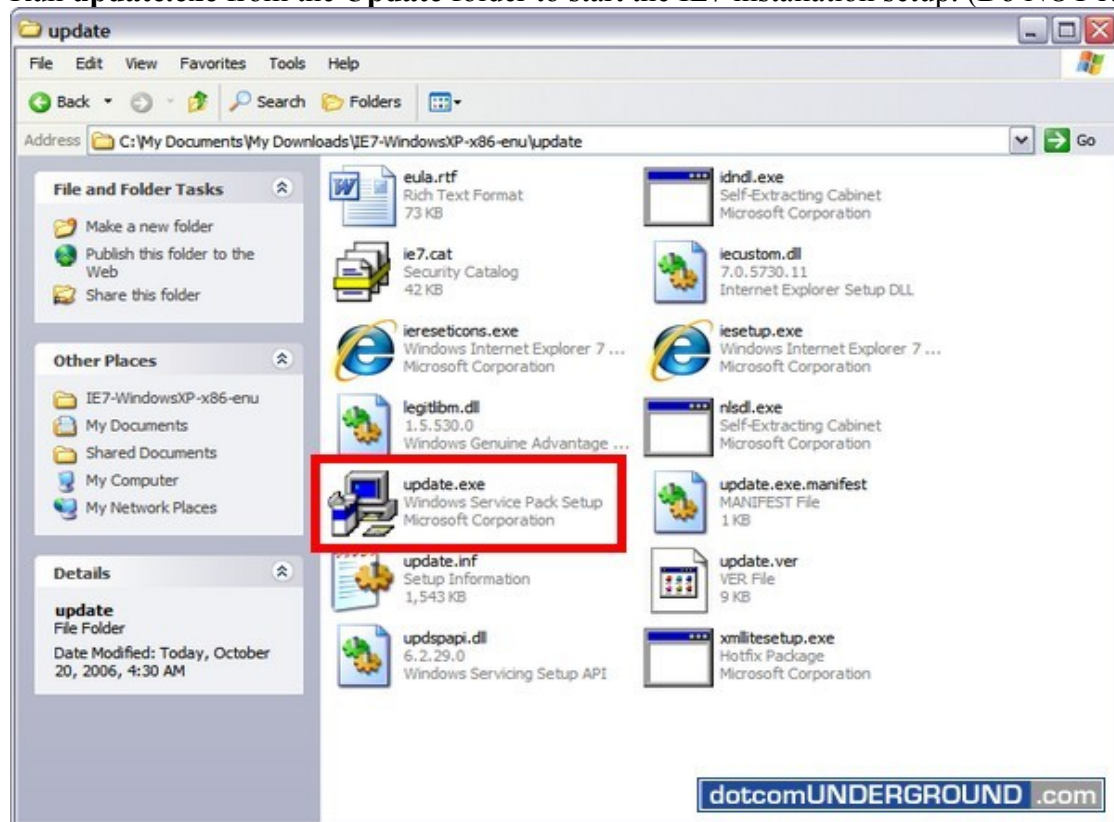

Inside the **update** folder there is a file named **iecustom.dll**

Copy the patched **iecustom.dll** to the **Update** folder of the extracted IE7 setup file. Overwrite any existing file.

Step 6:

Run **update.exe** from the **Update** folder to start the IE7 installation setup. (Do NOT run iesetup.exe).

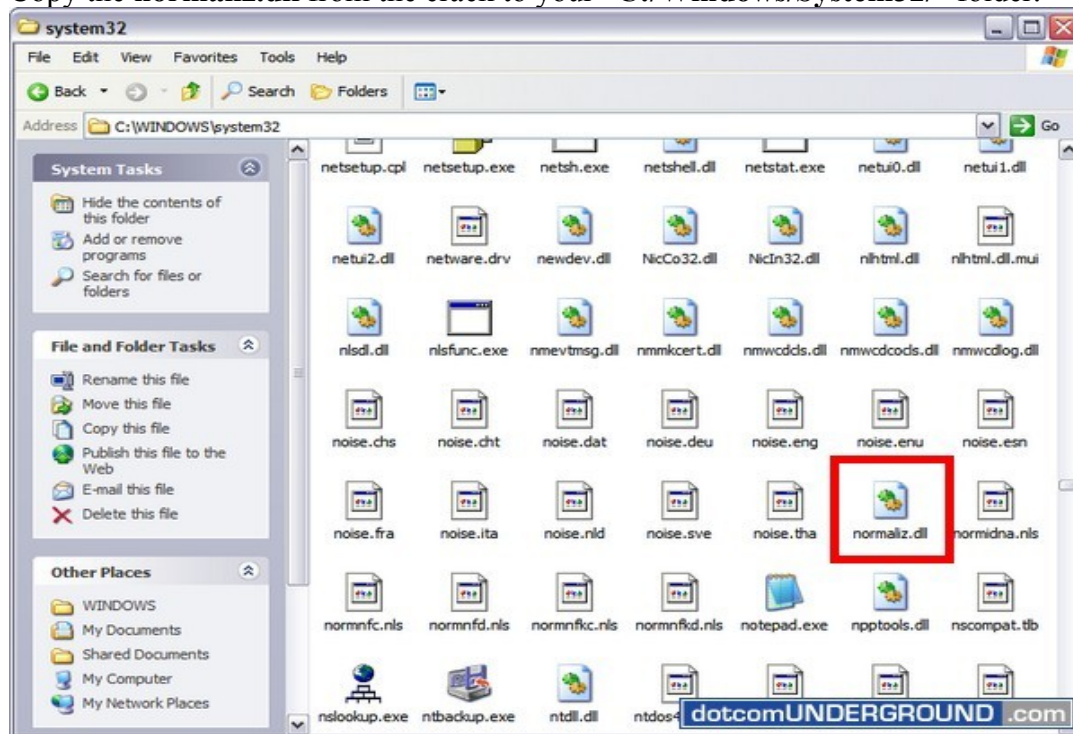

Step 7:

At the end of the successful IE7 installation process, you will be asked to restart Windows, DO NOT RESTART Windows now! Click on the box 'Do not restart now' and then select the 'Finish' button.

Step 8:

Copy the **normaliz.dll** from the crack to your “C:/Windows/System32/” folder.

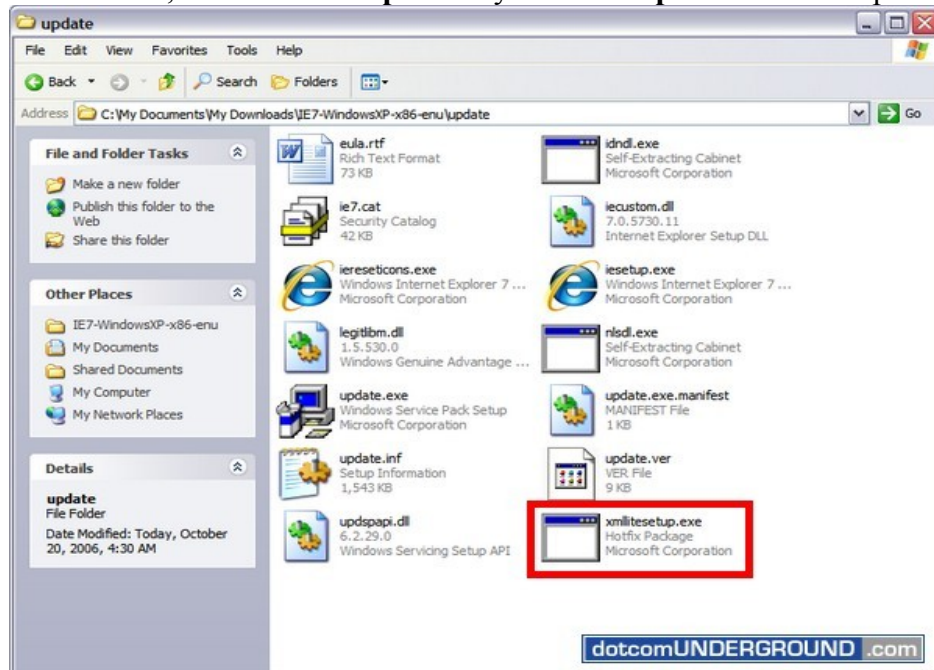

Step 9:

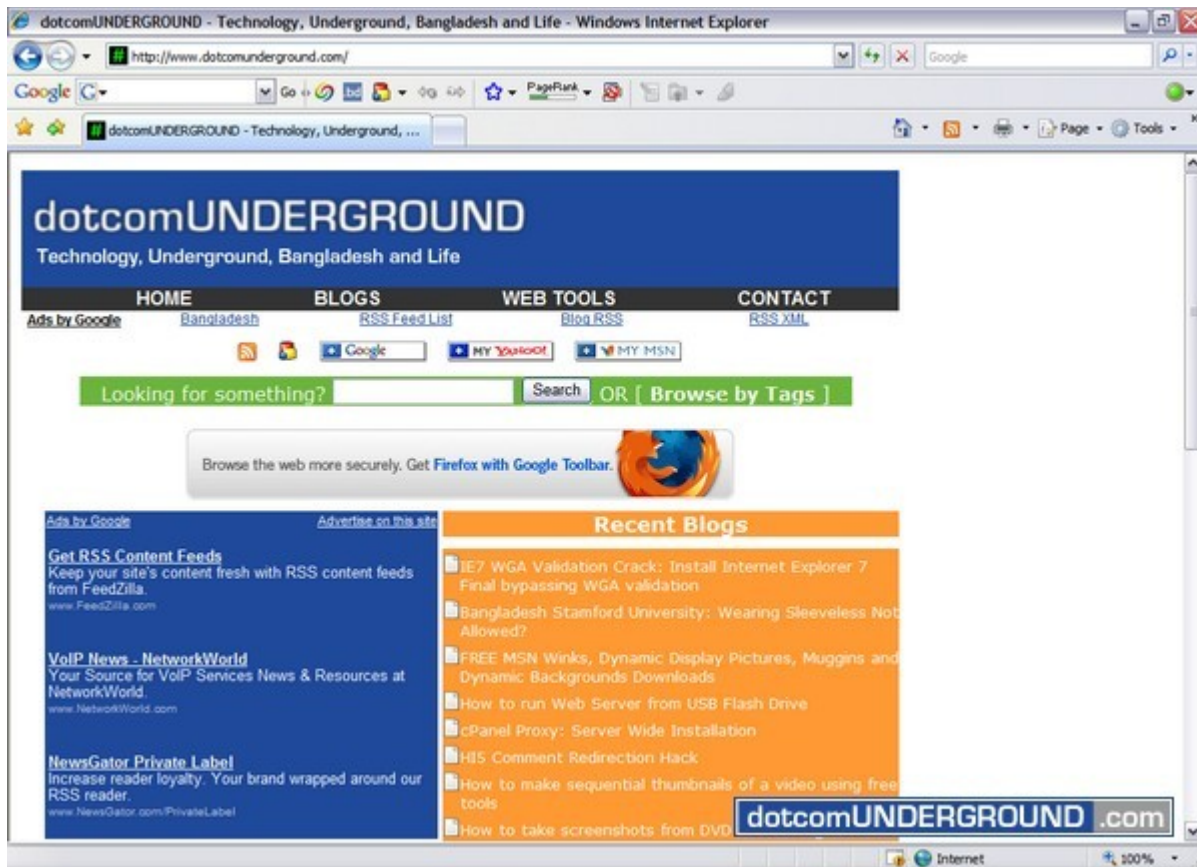

Restart Windows.

Step 10:

After reboot, run **xmllitesetup.exe** in your IE7's **update** folder to update.

Enjoy Windows Internet Explorer 7 Final 😊
